AWARDS CATEGORY DESIGN SPACES

Interspec Custom Joinery took on the challenge of transforming the space into two grand sets of bunk beds and two modern built-in robes, and the result is nothing short of stunning.

The robes feature two-tone polyurethane doors/panels with a routed finger pull, elegantly matching other robes in the home. They are equipped with Blum Merivobox inner drawers and hinges, as well as shelving and Häfele Ova hanging, providing both style and functionality. The bunk beds, a true highlight of the project, boast clear-coated American Oak crown-cut veneer and custom batten panels in the bold Dulux Western Myall, tying in perfectly with other areas of the house.

For added flair, Häfele Loox warm white LED lighting with black aluminium extrusions was added, creating inviting reading nooks for the whole family to enjoy. The incorporation of state-of-the-art Hager GPOs with USB chargers ensures the rooms are well equipped for modern technology needs.

One of the standout features of this project is the solid powder-coated steel support for the top bunks, guaranteeing both safety and longevity for generations to come. The combination of luxury finishes and materials sets these rooms apart, making them truly timeless spaces.

The structural steel frame for safe passage, the incorporation of different bed sizes, the cleverly positioned LED lighting, and the innovative drawer stair unit for safe climbing and additional storage further highlight the exceptional craftsmanship and attention to detail.

To top it all off, the project received a KBDi nomination, solidifying its status as an outstanding achievement in luxury interior design. Interspec Custom Joinery has truly outdone itself with this project, leaving a lasting impression on anyone who lays eyes on this remarkable transformation.
